

Gradescope Autograder

Common Submission Problems

Missing Files

Error message: “Your submission is missing one or more required files. Please make sure you have uploaded all required .java files.”

Solution: Double check the assignment README to make sure you have submitted the correct files. Most assignments only allow files that you are required to modify, and .class files are not accepted.

Timeout

Error message: “Your submission timed out. It took longer than 600 seconds to run.”

Solution: Your code takes longer than 10 minutes to run, which almost always means there is an infinite loop. Fix this problem in Eclipse and submit again.

Execution Failure

Error message: “Autograder failed to execute”

Solution: This usually means that there is a bug in the autograder. Contact an instructor or TA if you see this error. As long as your code runs properly in Eclipse, you will receive credit.

General Error

Error message: “There was an error processing your code. Please check the above output for errors and make sure you uploaded all required files. Use the resubmit button at the bottom right corner of the page to try again. If you see this message again, contact your instructor.”

Solution: Make sure your code runs properly in Eclipse before submitting.

Something Else

If you see an error that does not match any of the ones listed above, contact an instructor or TA.

If you have any questions about Gradescope, contact marandcp@rose-hulman.edu or a CSSE220 instructor
