

Gradescope Autograder

How to grade an assignment

Prerequisites

- Local copy of CSSE220 repository (github.com/rhit-csse/csse220)
- Local copy of autograder repository (github.com/cm090/gradescope-autograder)
- Instructor/TA access to the Gradescope course

Download Student Submissions

Note: These steps are not required if the assignment uses an autograder

1. Select the assignment you want to grade
2. Click on **Review Grades**
3. Click on **Export Submissions**
4. Once the submissions have been downloaded, open `file-tool/Csse220FileTool.jar` in the autograder repository and follow the instructions
5. When grading using this method, the submission number reflects the time of submission (lower is earlier). Grading online will follow this, where the first person in the list submitted first.

Grading Submissions Online

1. Click **Grade Submissions**, then **Manual Grading**
2. On the first submission only, select **Rubric Settings** and disable score ceiling and floor
3. If the unit tests do not accurately reflect the student's grade, use this section to add or take off points. When grading an assignment without an autograder, enter the score with comments [here](#).
4. Select a line of code to leave a more specific comment

Submitting Grades

1. Click **Review Grades**, then **Post Grades to Moodle** and **Publish Grades**
2. Optionally **Download Grades** and import to the Google Sheet
3. Students who didn't submit work to Gradescope need to have their grade manually set to 0 in Moodle. In the gradebook, select the pen icon next to the assignment name and scroll to the bottom. Check the **Perform bulk insert** box and click **Save**.

If you have any questions about grading through Gradescope, contact a CSSE220 instructor
